

Victorian Railways

In 1804 the first steam train was built and the railways moved on immensely from then. Stephenson built the first steam train and he called it the Stephenson's rocket. In September 1825 the Stockton And Darlington railway was celebrated from then on. In 1825 there was only 25 miles of public railway roads open. But today modern trains can do a lot more miles than they used to be able to

This is what a Victorian steam train would have looked like.

When the steam trains first came out became very popular. Very soon they became an important part of people's lives. For example they could take people to and from work; they could also escort people on holiday.
