

Rainforest

Rainforests most of the time are wet; they are sometimes called a jungle. The Amazon rainforest is the most famous.

Lots of animals are bugs, lizards, mammals. Jaguar and leopards live in the rainforest.

A lot of trees are in the jungle (rainforest). Most animals live in the canopy of the tree (the bottom of the leaf spread).

Lots of types of monkey live in the rainforest like the Baboon and Orangutan.

Many birds live in the rainforest like the Harpy eagle and different owls. My most favourite of all is the harpy eagle.

Snakes are the most deadly animal of all king cobra and gaboon viper are the best snakes in the world.
